

Name: Harsh Ramakant Neve

AWS Project: Automate CI/CD Pipelines using Lambda

Output:

The image displays two screenshots from the AWS management console. The top screenshot shows the Amazon S3 console for a bucket named 'cicd-demo-bucket-1234'. The 'Objects' tab is selected, showing a list of two objects: 'buildspec.yml' (190.0 B) and 'index.html' (131.0 B), both uploaded on May 1, 2026. The bottom screenshot shows the AWS CodePipeline console for a pipeline named 'my-first-project'. The pipeline is in a 'Successful' state and consists of three stages: 'Source' (using 'Provider: AWS CodeCommit'), 'Build' (using 'Provider: AWS CodeBuild'), and 'Deploy' (using 'Provider: AWS CodeDeploy'). Each stage has a 'Source: Update index.html' action.

Hello from CI/CD Pipeline

RUN HO GAYA..!
